ADDENDUM No. 2
August 14, 2018

REMINDER: Bids are due to the Cecil County Purchasing Office by 1:30 p.m. on August 22, 2018. Bid Opening will be held at the County Administration Building in the Rising Sun Room.

A. Addendum No. 2 is issued as part of the Contract Document, to inform and/or specify changes, which take precedence over information contained in the original Contract Documents. Unless otherwise specifically noted or specified hereinafter, or shown on drawings or schedules accompanying this Addendum, all work required by this Addendum shall conform to the applicable provisions of the Contract Documents. It shall be the responsibility of the Respondent to include in their proposal any cost implications of this Addendum. All Respondents are to indicate on the form of proposal submitted by them, acknowledgement of receipt and compliance with the contents of this Addendum No. 2.

B. Any provision in any of the Contract Documents, which may be in conflict or be inconsistent with the contents of this Addendum, shall be void to the extent of such conflict or inconsistency.

C. Note: Addendum No. 1 was issued with the wrong project title. Addendum No. 1 was incorrectly titled Marley Road Sewer Extension. Addendum No. 1 is for the Mill Run Service Area project.

D. The following clarifications are provided based on questions received from bidders after the pre-bid information conference:

1. Pay item A-10 does not include sufficient quantity of pipe from MH P-1 to the Wet Well. Will that 19 LF be paid under Item A-10 or is to be considered incidental to a Pump Station LS item?

   It is assumed this question is pertaining to Bid Item A-11 and the pipe alignment shown on Drawing C-17. The 19 LF between MH P1 and the wet well shall be considered incidental to Bid Item A-14.
2. Since the proposed Marley Road Manhole will be installed new on another project, will it be fabricated with a hole for this project’s force main and will it already have the epoxy coating installed?

The Marley Road Manhole that provides the connection point for the Mill Run project will be installed with a 15” HDPE pipe stub capped and sticking outside the manhole for connection of the force main from the Mill Run Pump Station. The Contractor will be responsible for installing the 8”x15” reducer as shown in Detail 40 on Sheet 58 (Drawing Number D-6) and butt fusion connection of the force main. The Contractor will also be responsible for coating the interior of the Marley Road manhole as indicated in the same detail.

3. Please provide the required SDR for the 8” and 15” HDPE force main?

**All HDPE pipe shall be SDR11.**

4. Can you please confirm if the precast wet well & valve chamber are required to have a waterproof membrane installed as described in spec section 7100? It is shown on the plans?

As indicated in note no. 4 on Sheet 41 (Drawing No. M-2) linings and coatings of the wet well and valve vault shall be in accordance with the contract specifications. The coatings for the wet well and valve vault shall be applied by the precast manufacturer in accordance with the contract specifications prior to installation. Coating shall be in accordance with Specification Section 07100.

5. Is the HDPE pipe required to have coextruded color stripping?

**No. Coextruded color stripping is not required for this project.**

6. Is pollution liability insurance an absolute requirement for this project?

**Yes, this is a USDA requirement for this project because it will be USDA financed.**
