COUNTY COUNCIL OF CECIL COUNTY, MARYLAND
LEGISLATIVE SESSION DAY 2020-19
RESOLUTION NO. 52-2020

Title of Resolution: Approval – Nuisance Flooding Plan

Synopsis: A Resolution to adopt the Cecil County Nuisance Flooding Plan.

Introduced by: Council President on behalf of the County Executive

Introduced and ordered posted on: September 1, 2020
Scheduled for consideration on: September 15, 2020

By: James Massey
Council Manager

Notice and title of Resolution having been posted on September 1, 2020 at the County
Administration Building, 200 Chesapeake Blvd, Elkton, MD and consideration by the Council
having been scheduled on September 15, 2020.

By: James Massey
Council Manager

Explanation: CAPITAL LETTERS INDICATE LANGUAGE ADDED TO EXISTING DOCUMENT
Strike-through indicates language deleted from existing document
Underlining indicates language added to document by amendment.
Double Strike-through indicates language stricken from document by amendment.
WHEREAS, pursuant to Section 3-1006 of the Natural Resources Article of the Annotated Code of Maryland, the Coast Smart Council, in consultation with the Department of Planning, Department of Natural Resources and Department of the Environment, was authorized to develop and publish guidelines to assist local jurisdictions in the collection of data to establish nuisance flooding baselines; and

WHEREAS, the Coast Smart Council was required to study and provide analysis regarding standards and factors relevant to the establishment of Coast Smart siting criteria and design criteria; and

WHEREAS, pursuant to Section 3-1009 of the Natural Resources Article of the Annotated Code of Maryland, on or before October 1, 2019, the Department of Planning, in consultation Department of the Environment, developed and published guidelines to assist local jurisdictions in the collection of data to establish nuisance flooding base; and

WHEREAS, pursuant to Section 3-1018(B) of the Natural Resources Article of the Annotated Code of Maryland, local jurisdictions that experience nuisance flooding are required to develop a plan to address nuisance flooding; and

WHEREAS, local jurisdictions are required to update the nuisance flooding plan once every five years; and

WHEREAS, the local jurisdiction must publish the nuisance flooding plan on the local jurisdiction’s website; and

WHEREAS, pursuant to Section 3-1018(C) of the Natural Resources Article of the Annotated Code of Maryland, a local jurisdiction that develops a plan to address nuisance flooding shall submit a copy of the nuisance flooding plan to the Department of Planning on or before October 1, 2020; and

WHEREAS, the Cecil County Department of Land Use and Development Services has prepared Nuisance Flooding Plan as required by state regulations; and

WHEREAS, the Cecil County Planning Commission recommended approval of the draft of the Cecil County Nuisance Flooding Plan at their meeting on August 17, 2020; and

WHEREAS, the draft of the Cecil County Nuisance Flooding Plan is attached as
NOW, THEREFORE, BE IT HEREBY RESOLVED BY THE COUNTY COUNCIL OF CECIL COUNTY, MARYLAND that the Cecil County Nuisance Flooding Plan, attached as Appendix 1, is approved and adopted.

AND BE IT FURTHER RESOLVED BY THE COUNTY COUNCIL OF CECIL COUNTY, MARYLAND, that this Nuisance Flooding Plan shall be submitted to the Maryland Department of Planning on or before October 1, 2020.

AND BE IT FURTHER RESOLVED BY THE COUNTY COUNCIL OF CECIL COUNTY, MARYLAND, that this Resolution shall take effect on the date of its passage.

INTRODUCED: September 1, 2020
ADOPTED: September 15, 2020

August 18, 2020

County Council of Cecil County
c/o The Honorable Robert Meffley, President
200 Chesapeake Blvd., Suite 2110
Elkton, MD 21921

Dear Sir:

Please be advised that the Planning Commission, at their meeting on August 17, 2020, made the following recommendation in regard to the items below:

DRAFT – Cecil County Nuisance Flooding Plan

APPROVAL.

AGRICULTURAL PRESERVATION DISTRICT:
FILE CE-21-01 -APPLICANT: Darrell & Eva Byerly.
FOR: Preservation District Establishment.
PROPERTY LOCATION: 1285 Cecilton-Warwick Road, Warwick, MD 21912, Election District: 1, Tax Map; 58, Grids: 22 & 16, Parcels: 13, 73, 62.
ACREAGE: 302.34.
PROPERTY OWNERS: Darrell & Eva Byerly.

APPROVAL.
REZONING:
FILE: 2020-04  APPLICANT: 929 West Pulaski Hwy, LLC.
 REQUEST: Request to rezone .626 acres from Residential Mixed Use, (RMU) to Heavy Industrial, (M2).
 PROPERTY LOCATION: 927 West Pulaski Hwy., Elkton, MD 21921, Election District: 3, Tax Map: 26, Parcel: 55.
 PROPERTY OWNER: 929 West Pulaski Hwy, LLC c/o Charmie Polansky.
 PRESENTLY ZONED: Residential Mixed Use, (RMU).

APPROVAL, due to a demonstrated mistake in the 2011 Comprehensive Rezoning.

Sincerely,

[Signature]
Eric S. Sennstrom

Background
Pursuant to Maryland House Bill 1427 (2019), §3-1018(b) and (c), on or before October 1, 2020, a local jurisdiction that experiences nuisance flooding (NF) shall develop a Plan to address nuisance flooding. In addition, a local jurisdiction shall update the plan every five years; publish the plan on the local jurisdiction’s website; and shall submit a copy of the Plan to the Maryland Department of Planning. This legislation is an update to Maryland Senate Bill (SB) 1006 and House Bill 1350 (2018) that states “on or before July 1, 2019, a local jurisdiction that experiences nuisance flooding shall develop a plan to address nuisance flooding.” The legislation further specifies that the plan must be submitted to the Maryland Department of Planning, published on the local jurisdiction’s website, and updated at least every five years.

The Cecil County Nuisance Flood Plan (NFP) will help to better understand the extent of nuisance flooding, create an inventory of conditions that attribute to nuisance flooding, and document the number and location of nuisance flood events, in an effort to respond to and implement risk reduction actions.

I. Introduction
Flooding is one of the most common natural hazards experienced in Cecil County. Depending on the circumstances, flooding may be widespread or isolated, developing slowly or quickly. It may take the form of coastal, overland, or flash flooding. Floods may originate from ice jams or from the failure of dams. Nuisance flooding is a more specific and commonplace phenomenon which dictates a slighter response and threatens the community in less intrusive ways. These small magnitude events are happening more often and becoming more chronic than more extreme events.

The National Oceanic and Atmospheric Administration (NOAA) defines nuisance flooding, or high tide flooding, as “flooding that leads to public inconveniences such as road closures. It is increasingly common as coastal sea levels rise.” The language of SB 1006 refers to nuisance flooding as “high-tide flooding that causes public inconvenience.” Nuisance flooding is typically unrelated to particular storm events, though it may be exacerbated by long-duration wind events or passing storm systems. As such, it is frequently referred to as “sunny day flooding.”

Nuisance flooding is capable of disrupting daily activities through a variety of mechanisms, such as the closure of roads due to high water, the inundation of yards and parks, and the impairment of engineered and natural drainage systems. Currently, these disruptions typically occur for a period of several hours and then abate. However, as a changing climate drives sea levels higher and precipitation events to greater severity, these repeated “nuisance” impacts will become significant stressors on the infrastructure, natural systems, emergency response, public health and safety, and fabric of the community.

In Cecil County, nuisance flooding occurs most predominately in locations near or adjacent to major bodies of water. Along the Big Elk Creek, nuisance flooding is common on residential and commercial properties. Elsewhere in the County, nuisance flooding is experienced as debris from farm fields washes into ditches and eventually settles on roadways as ditches overflow. Culverts in low-lying areas may have difficulty conveying water adequately, causing ponding on low-lying roadways throughout the County. This plan will be addressing both tidal and precipitation nuisance flooding based events. Without the
II. Preparing for Nuisance Flooding
Because nuisance flooding is a complex problem, strong partnerships between planning, public works, emergency management, and geographic information systems (GIS) are necessary for Cecil County to properly prepare for the impacts of nuisance flooding. In particular, it is important that departments collaborate to inventory and map chronically inundated areas and prepare to implement targeted mitigation actions.

As part of the nuisance flood planning process for Cecil County, a team of staff created a thorough inventory of known flood hazard areas, which can be found as Appendix I to this document. The inventory will be used as a baseline for areas of further study and evaluation. Stakeholder groups and agencies involved in the nuisance flood planning and inventory process can be found in Appendix II.

In addition to mapping, accurate flood forecasting and warning is critical to the safety and preparedness of a community. Weather forecast data is received from the National Weather Service (NWS) forecasting office at Mount Holly, New Jersey. Critical tide information is received from the NOAA tide gauges stationed at the Big Elk Creek, Conowingo, and Octoraro Creek, as well as United States Geological Survey (USGS) gauges also reported by the NWS elsewhere throughout the County. These gauges allow Cecil County to be aware of and prepare for possible nuisance flooding impacts.

The Cecil County Department of Emergency Services (DES) maintains a close relationship with NWS Mount Holly, receiving notifications of special hazards and watches or warnings of severe weather before the community is impacted. The timeliness of these severe weather alerts is critical when the potential for public safety impacts exists, such as in flood situations. Additionally, it is the responsibility of the Cecil County DES to disseminate public safety information via their mass notification system and social media outlets.

The Cecil County Nuisance Flood Plan is consistent other Cecil County plans, including the 2010 Comprehensive Plan, the 2015 Hazard Mitigation Plan, the 2017 Land Preservation, Parks & Recreation Plan, the 2019 Green Infrastructure Plan, and the 2020 Strategic Plan. Additionally, elements from Cecil County’s municipalities’ plans including Elkton’s 2007 Flood Control Study & 2018 Flood Risk Assessment; Charlestown’s 2019 Stormwater Vulnerability and Floodplain Management Assessment; and Port Deposit’s 2018 Waterfront Master Plan have been incorporated into this plan. This plan covers areas in Cecil County and the municipalities that lie within for the period from October 1, 2020 through December 31, 2025.

III. Responding to Nuisance Flooding
   A. Emergency Response
Thresholds are maintained for Cecil County which direct a set of actions based on an inundation level or frequency of flooding. These thresholds are meant to supplement actions directed by the Cecil County Emergency Operations Plan.
B. Nuisance Flooding Thresholds

<table>
<thead>
<tr>
<th>Threshold</th>
<th>Response Level</th>
<th>Required Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flood waters are present below nuisance levels and are rising</td>
<td>Monitor Inundation</td>
<td>Above actions; notify Department of Public Works (DPW) and State Highway Administration (SHA) personnel to monitor flood levels as needed and place high water signs at impacted locations.</td>
</tr>
<tr>
<td>Flood waters are high enough to warrant temporary road closures</td>
<td>Flood Response</td>
<td>Above actions including mass notifications; Place additional DPW and SHA personnel on standby; close roads and reroute traffic as flooding reaches hazardous levels</td>
</tr>
</tbody>
</table>

When flooding reaches such a severity that life safety, critical infrastructure, and key resources are threatened, “nuisance” flooding levels have been exceeded. Below are response concepts consistent with the Cecil County Emergency Operations Plan which may become necessary as flood waters rise beyond nuisance levels. Determination of nuisance flood thresholds will be evaluated during the 2020-2025 time period.

- **Response**
  - Lifesaving activities
  - Incident containment
  - Public health concerns
  - Maintenance of transportation routes
  - Maintenance of critical facilities
  - Public warning mechanisms
  - Responder health & safety
  - Media & VIP management
  - Control & coordination of operations
  - Provision of transport, shelter and documentation of displaced persons
  - Restoration of normality

- **Recovery**
  - Begins when life safety actions are complete
  - Facilitate the restoration of systems to normality
  - Assess damage and return vital life support systems to minimum operating standards
  - Collate financial cost of the event
  - Legal implications, claim investigation
  - Debrief & compilation of final report
  - Community & restoration of services

C. Documentation

Documenting the extent and impacts of nuisance flooding is critical to public safety and the long-term resilience of Cecil County. This information will be documented and updated on a regular basis for emergency planning purposes and informing future restoration activities. A review of flood documentation should provide Cecil County a comprehensive view of trends in flooding over time. The following factors will be recorded by Cecil County DES and reported to the Department of Land Use and Development Services (DLUDS) for tracking and archiving. This includes instances of nuisance flooding
addressed by SHA and communicated over the radio. Documentation and mapping analyses will be
distributed to stakeholder groups and agencies as part of the annual review process.

- Date, time, and location of nuisance flooding
- Impacts (e.g. “estimated depth and extent of water on the roadway,” “ditch overflow,” “docks
  underwater,” critical facility threats, etc.)
- Agency notified and action taken

See Appendix III for a copy of the Cecil County nuisance flooding documentation tool. Additionally, the
MyCoast Maryland tool is scheduled to come online Fall 2020, which the County will consider using as
another documentation tool.

D. Hazard Assessment

Responding to and documenting nuisance flooding are building blocks to assessing the hazard’s location
and impacts. County Staff has created a preliminary countywide inventory of critical facilities, roads,
and sewer infrastructure that are located within the 100-year floodplain. Critical facilities have also been
identified within the 500-year floodplain and sea level rise inundation areas predicted for the year 2100,
when combined with a 100-year storm event. The sea level rise study for the region also includes an
estimate for the number of buildings that could be impacted by 2050 and 2100, including damage
estimates in US dollars. Additionally, staff will be reviewing the locations of roads compared to Base
Flood Elevation and topography, and reviewing available bridge and culvert data. These sites already
have quantified flood threats, and when combined with nuisance flooding documentation, will provide
for a clearer picture for specific mitigation actions to consider. The documented nuisance flooding areas
will be reviewed by stakeholder groups and agencies to help assess the problems. Once the problems
are identified, mitigation strategies will be developed with the ultimate goal of providing an
individualized action plan for the site. Once the action plan is implemented, the outcomes will be
evaluated, and the action plan will be revised. This cycle will continue until nuisance flooding is
minimized to the maximum extent possible.

IV. Nuisance Flooding Planning Goals

Cecil County has established the following goals to help inform the review of possible activities and
future mitigation actions:

1. Protect the lives and properties of residents and businesses from flooding.
2. Ensure that public services and critical facilities operate during and after flooding.
3. Prioritize mitigation projects to reduce flood damage to communities.
4. Inform the general public of actions they can take to reduce their flood risk.
5. Protect, preserve, and restore natural floodplain functions.
V. Nuisance Flooding Management Activities

A. Preventative Measures
Cecil County uses a variety of ordinances and codes to help ensure new development does not adversely impact existing homes and businesses, as well as, several ongoing programs to help reduce flood threats.

1. Floodplain ordinance
2. Building codes
3. Stormwater management
4. Drainage system maintenance

B. Property Protection
New residential development in the 100-year floodplain is required to be elevated two feet above the base flood elevation and new critical facilities in the 100-year floodplain are required to be elevated three feet above the base flood elevation. Existing structures can also be voluntarily elevated or retrofitted to reduce flood risk, and flood insurance can be purchased to help recover from flood damages.

C. Natural Resource Protection
Cecil County has a number of different agencies and local non-profit groups whose primary functions are land stewardship, and making sure open spaces are preserved and/or restored. These activities include erosion and sediment control, wetland protection, maintaining wildlife corridors, and water quality improvement projects.

D. Emergency Services
Cecil County’s Department of Emergency Services takes measures to reduce the impacts of flooding on our communities. They are responsible for recognizing threats, providing warning to citizens, and responding during and after a flood event to help protect lives, health, and properties.

E. Public Information
Cecil County agencies disseminate flood risk information in a variety of ways, including an online floodplain map information service, outreach projects via social media and community events, local libraries, and environmental education activities. Nuisance flooding information dissemination activities will be further developed in this plan and future plans including the Program for Public Information Plan to be developed in the near future.

VI. Mitigating Nuisance Flooding Impacts
Both the Emergency Operations Plan and the Hazard Mitigation Plan (HMP) for Cecil County address measures by which the impacts of flooding can be mitigated, or lessened, by structural and nonstructural means. The Green Infrastructure Plan identifies natural infrastructure solutions, such as open space preservation, restoration of natural systems, and living shorelines, which can also help to reduce flood
The principles of floodplain management are fundamental to the proper mitigation of nuisance flooding in Cecil County. Cecil County’s floodplain regulations already exceed the minimum requirements set by FEMA and the NFIP. For example, two or three feet of freeboard, development restrictions on the size of accessory structures, and open foundations for new dwellings, etc. – can be more effective in mitigating the impacts of both nuisance flooding and other major flooding events.

Cecil County’s HMP identifies four areas of focus that help direct mitigation activities. These four areas include:

- Ensure that existing structures are resistant to flood-related damage,
- Create awareness of floodplain hazards and protective measures,
- Protect critical facilities, and
- Prepare/update stormwater management plans for various areas in the County.

In addition to actions specified in the HMP, the NFP includes activities which Cecil County will implement or consider implementing to mitigate the impacts of nuisance flooding. These activities support the four areas of focus found in the Hazard Mitigation Plan. They also support the implementation strategies identified in the Cecil County Green Infrastructure Plan and the goals and objectives of the Cecil County Comprehensive Plan.
### A. Table of Implementation Strategies

</tbody>
</table>
VII. Projections for Future Impacts

The areas impacted by nuisance flooding are projected to increase gradually in the coming years as changing climate elevates water levels and drives precipitation patterns to new extremes. This shift, however, is likely to accelerate gradually over time. New areas will also become impacted, leading to an increased number of businesses, residents, and critical infrastructure at risk. Public services will also be more frequently impaired as flooding increases.

Cecil County will maintain a level of awareness of data made available by NOAA, the State of Maryland, the University of Maryland Center for Environmental Science, and other scientific institutions as it pertains to the community and local flood risks. These risks of increased nuisance flooding will be communicated appropriately to residents and decision makers and direct them to take appropriate action in the areas of emergency response and hazard mitigation. Elected officials and County staff will utilize venues such as County Council meetings and Planning Commission meetings to communicate information on long-term flood risks. Future projections of sea level change and nuisance flooding should also be integrated into land use planning, floodplain management, comprehensive planning, and capital investment planning.

VIII. Plan Maintenance

Implementation and maintenance of the nuisance flooding plan is critical to the success of this planning process. Once adopted, plan maintenance will adhere to a schedule of developing an annual progress report on the action items identified in the section on Mitigating Nuisance Flooding Impacts. Members of the nuisance flooding plan steering committee will be invited to an annual meeting conducted by the DLUDS and DES to discuss collaborative efforts with community partners, monitor funding sources, and recommend any adjustments to lead and support agencies, funding sources, and timeframes for completion. Understanding local capacity will be a key part of the discussions and will revolve around new approaches getting projects into the ground, engaging different groups and new technical experts, and developing incentive programs. The DLUDS and DES are responsible for preparing the annual progress report and will submit the document to the appropriate agencies for review and comment. The DLUDS and DES are also responsible for coordinating with other Departments and the Towns to integrate the appropriate nuisance flooding implementation strategies into future updates of the Comprehensive Plan, Hazard Mitigation Plan, Stormwater Management Plan, Land Preservation, Parks, and Recreation Plan, Green Infrastructure Plan, and Strategic Plan. Finally, the plan must be updated every five years and include any changes within the nuisance flooding areas, mapping assessments, and mitigation actions. The next plan update will occur in 2025.
Appendix I – Nuisance Flooding Location Inventory

A team of staff created a thorough inventory of known flood hazard areas. The inventory will be used as a baseline for areas of further study and evaluation.

</table>
Critical infrastructure includes power production and transmission facilities, hospitals, police stations, fire stations, emergency management centers, water supplies, wastewater treatment facilities, evacuation routes, and more. We compared locations of critical infrastructure in Cecil County to SHA’s predicted 1% flood extent in the year 2100 in coastal areas (described in previous section), as well as, the current 0.2% flood extent in riverine areas. Scientists typically use statistical probability to put a context to floods and their occurrence. For example, 0.2% has a 1 in 500 chance of occurring any given year, 1% has a 1 in 100 chance, and 10% has a 1 in 10 chance. We found 49 potentially vulnerable facilities, each with varying degrees of threat level, current protection, and recommended flood reduction measures.

</table>
| Port Herman Condominiums Treatment Plant | • Not in 100yr or 500yr floodplain  
• 1% chance storm with sea level rise by 2100 | Low          | permeable surfaces surrounding, little wooded area                                  | • Retention or detention pond nearby  
• Constructed wetland and/or submerged gravel wetlands                                                      |
| Harbour View WWTP             | • Within 100yr floodplain  
• 0.2% chance storm with sea level rise by 2050  
• 1% chance storm with sea level rise by 2100 | High         | existing forest provides some protection, most plant components have been relocated outside of 100 yr floodplain | • Constructed wetland with infiltration berms and retentive grading  
• Restoration of floodplain once relocation is complete                                                  |
| Elkton Water Treatment Plant  | • Within 100yr floodplain  
• 1% chance storm with sea level rise by 2100  
• 0.2% chance storm with sea level rise by 2050, level 3 Hazard Vulnerability on Delaware Ave | Medium       | wooded areas surrounding facility and lining adjacent creek                         | • Bio-swale into adjacent forested area  
• conservation landscaping  
• Constructed wetland with infiltration berms and retentive grading                                     |
| Cecil County Detention Center | • Within 500yr floodplain  
• 1% chance storm with sea level rise by 2100 | Medium       | Minimal pervious surfaces surrounding facility                                     | • Retention or detention pond on the grounds  
• Upgrade to porous pavement and addition of filter strips  
• Constructed wetland                                                                                   |

Appendix III- Nuisance Flood Documentation Tool

Nuisance Flooding Report
Cecil County Department of Emergency Services

Submitted By: Paula Robinson
Date/Time Submitted: Jun 16, 2020 at 12:12

Definition
Nuisance Flooding: High tide flooding that causes a public inconvenience. Frequently referred to as "sunny-day" flooding, it is typically unrelated to storm events. It may be exacerbated by long duration wind events, passing storm systems, and tides. It dissipates quickly.

General Information
Date of Flooding: Jun 16, 2020
Time of Flooding: 1211

Reporting Information
Location of Flooding: 107 Chesapeake Blvd Suite 108 Elkton, MD 21901
Name of Caller: Paula Robinson
Phone Number of Caller: 4430074065
CAD Event #: 123456789
Impacts of the Flooding: None — this is a test

Notifications (If Necessary)
Cecil County Departments: Emergency Services
Outside Agencies: None
Actions Taken: None — this is a test
Appendix IV - Nuisance Flooding Location Maps
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
200 block of Delaware Ave, Elkton, MD

1,610 ft of Delaware Ave
Flooding source: Big Elk Creek
Road Ownership: State of Maryland
Bridge present: Yes (state owned)

Address Points
Road Segments Prone To Flooding
Water Lines
Town / Private Sewer Line
A - 100 yr flood, no base elevations
AE - 100 yr flood, base elevations determined
VE - 100 yr flood, subject to high velocity wave action

April 1, 2019
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
100 block of Howard St, Elkton, MD

1,200 ft of Howard St
Flooding source: Big Elk Creek
Road Ownership: Town of Elkton
Bridge present: No
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
100 and 200 block of S Bridge St, Elkton, MD

1,540 ft of S Bridge St
Flooding source: Big Elk Creek
Road Ownership: State of Maryland
Bridge present: Yes (state owned)
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
Vicinity of 300 block of Fletchwood Rd, Elkton, MD

1,230 ft total roadway
Flooding source: West Creek
Road Ownership: Cecil County
Bridge present: Yes (County owned, XCE-2012)
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
Intersection of Deaver Rd and S Simpers Rd, Elkton, MD

Road Segments Prone To Flooding
Water Lines
Gravity San. Sewer (county owned)
Address Points
- A - 100 yr flood, no base elevations
- AE - 100 yr flood, base elevations determined
- VE - 100 yr flood, subject to high velocity wave action

April 2, 2019

250 ft total roadway
Flooding source: East Branch of Laurel Run
Road Ownership: Cecil County
Bridge present: No

Intersection of Deaver Rd and S Simpers Rd, Elkton, MD
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
Elkton Rd and W Pulaski Hwy, Elkton, MD

1,300 ft of Elkton Rd
Flooding source: Little Elk Creek
Road Ownership: State of Maryland
Bridge present: Yes (state owned)

2,730 ft of W Pulaski Hwy
Flooding source: Little Elk Creek
Road Ownership: State of Maryland
Bridge present: Yes (state owned)

Road Segments Prone To Flooding
Town / Private Sewer Line
Water Lines
• Address Points

A - 100 yr flood, no base elevations
AE - 100 yr flood, base elevations determined
VE - 100 yr flood, subject to high velocity wave action

April 2, 2019
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
Ricketts Mill Rd and Appleton Rd, Elkton, MD

685 ft of Ricketts Mill Rd
Flooding source: Big Elk Creek
Road Ownership: Cecil County
Bridge present: Yes (County owned, CE-0027)

220 ft of Appleton Rd
Flooding source: Big Elk Creek
Road Ownership: State of Maryland
Bridge present: Yes (state owned)

April 2, 2019
575 ft of Broad St
Flooding source: Mill Creek
Road Ownership: State of Maryland
Bridge present: Yes (state owned)
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
1400 block of Frenchtown Rd, Perryville, MD

1,030 ft of Frenchtown Rd
Flooding source: Susquehanna River
Road Ownership: Town of Perryville
Bridge present: No

Road Segments Prone To Flooding
Town / Private Sewer Line
Water Lines
- Address Points
  - A - 100 yr flood, no base elevations
  - AE - 100 yr flood, base elevations determined
  - VE - 100 yr flood, subject to high velocity wave action

April 3, 2019
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
Edgewater Ave, Charlestown, MD

Road Segments Prone To Flooding
- Water Lines
- Gravity San. Sewer (county owned)
- San. Sewer Force Main
- Address Points

- A - 100 yr flood, no base elevations
- AE - 100 yr flood, base elevations determined
- VE - 100 yr flood, subject to high velocity wave action

April 3, 2019

MAP 10
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
Shore Dr, Pennsylvania Ave, and Kline Ave, Charlestown, MD

Road Segments Prone To Flooding
Water Lines
Gravity San. Sewer (county owned)
Address Points

A - 100 yr flood, no base elevations
AE - 100 yr flood, base elevations determined
VE - 100 yr flood, subject to high velocity wave action

April 3, 2019

1,925 ft of roads
Flooding source: North East River
Road Ownership:
1) Shore Dr = Cecil County
2) Kline & PA Ave = Private
Bridge present: No
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
N Main St (unit block) and S Main St (0-100 block), North East, MD

575 ft of N Main St
- Flooding source: North East River
- Road Ownership: State of Maryland
- Bridge present: Yes (state owned)

900 ft of S Main St
- Flooding source: North East River
- Road Ownership: State of Maryland
- Bridge present: No

Road Segments Prone To Flooding
Water Lines
Gravity San. Sewer (county owned)

- Address Points

A - 100 yr flood, no base elevations
AE - 100 yr flood, base elevations determined
VE - 100 yr flood, subject to high velocity wave action

April 3, 2019
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
W Cecil Ave (0-200 block), North East, MD

1,900 ft of W Cecil Ave
Flooding source: North East River
Road Ownership: State of Maryland
Bridge present: Yes (state owned)

April 3, 2019

Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
W Cecil Ave (0-200 block), North East, MD

1,900 ft of W Cecil Ave
Flooding source: North East River
Road Ownership: State of Maryland
Bridge present: Yes (state owned)

April 3, 2019
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
Washington St (unit block), North East, MD

400 ft of Washington St
Flooding source: North East River
Road Ownership: Town of North East
Bridge present: No

Road Segments Prone To Flooding
Water Lines
Gravity San. Sewer (county owned)
San. Sewer Force Main

Address Points

A - 100 yr flood, no base elevations
AE - 100 yr flood, base elevations determined
VE - 100 yr flood, subject to high velocity wave action

April 3, 2019
Inventory of roads and bridges that are vulnerable to flooding
from the Cecil County Green Infrastructure Plan
W Race St (0-100 block), North East, MD

840 ft of W Race St
Flooding source: North East River
Road Ownership: Town of North East
Bridge present: No

Road Segments Prone To Flooding
Water Lines
Gravity San. Sewer (county owned)
• Address Points

A - 100 yr flood, no base elevations
AE - 100 yr flood, base elevations determined
VE - 100 yr flood, subject to high velocity wave action

April 3, 2019
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
W Old Philadelphia Rd & North East Isles Dr, North East, MD

MAP 16

700 ft of W Old Philadelphia Rd
Flooding source: North East River
Road Ownership: State of Maryland
Bridge present: Yes (Amtrak owned)

1,130 ft of North East Isles Dr
Flooding source: North East River
Road Ownership: Town of North East
Bridge present: Yes (Town owned, CE-NE01)

Road Segments Prone To Flooding
Water Lines
Gravity San. Sewer (county owned)
San. Sewer Force Main
Address Points
- A - 100 yr flood, no base elevations
- AE - 100 yr flood, base elevations determined
- VE - 100 yr flood, subject to high velocity wave action

April 3, 2019
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan. Flooding 500 block of Calvert Rd, Rising Sun, MD.

885 ft of Calvert Rd
Flooding source: North East Creek
Road Ownership: Cecil County
Bridge present: Yes (County owned, CE-0011)

April 3, 2019

Road Segments Prone To Flooding
Water Lines
Gravity San. Sewer (county owned)
San. Sewer Force Main
Address Points

A - 100 yr flood, no base elevations
AE - 100 yr flood, base elevations determined
VE - 100 yr flood, subject to high velocity wave action

885 ft of Calvert Rd
Flooding source: North East Creek
Road Ownership: Cecil County
Bridge present: Yes (County owned, CE-0011)

April 3, 2019

MAP 17

38
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
Bank Street, Chesapeake City, MD

Areas of Nuisance Flooding
Program Points
A - 100 yr flood, no base elevations
AE - 100 yr flood, base elevations determined
VE - 100 yr flood, subject to high vel. wave action

675 ft of Bank Street
Flooding source: C&D Canal
Road Ownership: U.S. Army Corps of Engineers
Bridge Present: No

July 27, 2020
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
300-500 block of Slicers Mill Rd, Rising Sun, MD

Road Segments Prone To Flooding

- Address Points

A - 100 yr flood, no base elevations
AE - 100 yr flood, base elevations determined
VE - 100 yr flood, subject to high velocity wave action

April 3, 2019

2,200 ft of Slicers Mill Rd
Flooding source: Stone Run
Road Ownership: Cecil County
Bridge present: Yes (County owned, CE-0082)
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan
Crothers Rd & England Creamery Rd, Rising Sun, MD

1,500 ft of Crothers Rd
Flooding source: North East Creek
Road Ownership: Cecil County
Bridge present: Yes (County owned, CE-0056)

Road Segments Prone To Flooding
- Address Points
  - A - 100 yr flood, no base elevations
  - AE - 100 yr flood, base elevations determined
  - VE - 100 yr flood, subject to high velocity wave action

April 3, 2019

MAP 20
Inventory of roads and bridges that are vulnerable to flooding from the Cecil County Green Infrastructure Plan Moore Rd (0-100 block), Conowingo, MD

2,200 ft of Moore Rd
Flooding source: Octoraro Creek
Road Ownership: Cecil County
Bridge present: No

Road Segments Prone To Flooding
• Address Points

A - 100 yr flood, no base elevations
AE - 100 yr flood, base elevations determined

Flooding source: Failing stormwater facilities
Road Ownership: State
Sewer line at risk of exposure - Need to survey and see how much cover remains

Need to see how close this manhole is to the stream bank and what the conditions are
MH 838 - Major erosion compare the 2006 and 2019 photos. The concrete encasement is exposed and shows damage. There are also some trees on the bank that are in the sewer easement that would interfere with any repairs that need to be done.

MH 842 is at risk during floods. MH 843 has been exposed by erosion. Compare the 2006 and 2019 photos. Need to survey to see how much cover remains on the pipe.
Sewer lines and manholes at risk

At risk of exposure
Need to survey to see how much cover over the pipe

MH 864 is in the middle of the stream

At risk of exposure
Need to survey to see how much cover over the pipe

Concrete Encasement is exposed and damaged

This manhole is at great risk of exposure due to erosion and storm water levels
Manhole at risk of exposure from erosion

At risk of exposure
Need to survey to see how much cover over the pipe
At risk of exposure
Need to survey to see how much cover over the pipe

MH 1210 is in danger of exposure due to erosion

At risk of exposure
Need to survey to see how much cover over the pipe

Manhole is unable to be found

At risk of exposure
Need to survey to see how much cover over the pipe
At risk of exposure
Need to survey to see how much cover over the pipe

MH at risk of exposure due to erosion

At risk of exposure due to erosion
Sewer line at great risk of exposure due to erosion

Sewer line at great risk of exposure due to stormwater run off - not stream erosion

MH at great risk due to both stormwater run off and erosion from the stream

MH 1903 at risk of exposure due to erosion

At risk of exposure
Need to survey to see how much cover over the pipe

At risk of exposure
Need to survey to see how much cover over the pipe
